PROFESSIONAL SUMMARY

Results-driven Full-Stack and Backend Software Developer with 4+ years of hands-on experience building scalable, maintainable enterprise and fintech applications using Java, Spring Boot, Python, and Node.js. Proven ability to deliver end-to-end software solutions: from architecture and API design to CI/CD pipelines and cloud deployments (Azure). Recent work includes a full-stack Bulk Payment System with Mobile Money integration and an Intelligent Claims Processing System built with Spring Boot. Experienced in remote, agile, cross-functional environments with a strong record of performance optimisation, security implementation, and measurable business outcomes.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, PHP, SQL

Frameworks and Libraries: Spring Boot, Spring MVC, Spring Cloud, Spring AOP, Node.js, Angular, Maven

Full-Stack: RESTful API design, Spring Boot backend, Angular/React frontend integration, Swagger/OpenAPI

DevOps and CI/CD: GitHub Actions, Jenkins, GitLab CI/CD, Docker, Linux/Shell scripting

Cloud and Databases: Microsoft Azure (AZ-900 Certified), PostgreSQL, MSSQL, MongoDB

Architecture: Microservices, Agile/Scrum, ETL automation, LDAP/2FA security, AI/ML API integration

Tools: Git, Jira, Postman, IntelliJ IDEA, VS Code

PROFESSIONAL EXPERIENCE

Software Engineer (Full-Stack) | **Corenett Limited** | Ghana *Sep 2026 – Present*

- Built a full-stack Bulk Payment System with Mobile Money integration using Spring Boot for the backend and collaborated with a React frontend team to deliver seamless end-to-end payment workflows for clients.
- Developed an Intelligent Claims Processing System using Spring Boot, incorporating AI-driven classification logic to automate claims intake and routing; collaborated closely with a dedicated React frontend team throughout the build.
- Wrote clean, well-documented, and maintainable code following best engineering practices across both backend services and API layers.
- Participated in code reviews, technical discussions, and architectural planning to drive continuous improvement within the team.

Software Engineer (Backend) | **Cape Wesley** | United States (Remote) *Jan 2025 – Sep 2026*

- Designed and implemented a maker-checker microservice for enterprise audit workflows, achieving 100% compliance improvement across regulated processes.
- Integrated LDAP authentication and led a two-factor authentication (2FA) rollout, strengthening application-layer security for banking-sector clients.
- Deployed a helpdesk microservice with real-time tracking and analytics dashboards, reducing customer complaint resolution time by 70%.
- Collaborated with ML engineers to integrate an AI/ML classification API that automated banking sector categorisation, achieving 90% process automation.

Software Engineer (Backend) | **Excenit Limited** | Accra, Ghana *Jun 2021 – Dec 2024*

- Built and extended a full-stack ERP system with a payroll module using Spring Boot and Angular for fintech clients, increasing product demo requests by 75%.
- Improved financial data processing throughput by 90% through Java concurrency techniques and multi-threaded service design.

- Designed and maintained CI/CD pipelines using GitHub Actions and Jenkins, cutting deployment cycle times by 80%.
- Automated ETL workflows for financial reporting using SQL stored procedures and materialised views, achieving 85% client satisfaction.
- Developed and deployed RESTful APIs and analytics dashboards including a QR link generator with usage tracking, boosting client engagement.
- Led cloud migration of enterprise applications to Linux and Windows server environments with near-zero downtime.
- Participated in code reviews, architectural planning, and technical discussions, maintaining high standards of code quality and documentation.

Junior Developer | **LDS Church Welfare and Self-Reliance Service** | Accra, Ghana *Jun 2020 – Jun 2021*

- Co-developed a Front-Desk Application using Angular and PHP for customer intake and issue tracking.
- Managed customer records and issue resolution workflows in Microsoft Dynamics 365 CRM.

EDUCATION

B.Sc. Computer Engineering | University of Ghana, Legon *May 2017 | Second Class Upper*

- Thesis: Automated Fuel Management System with mobile and web interface (Angular, Android, PHP).

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900) | Microsoft

KEY ACHIEVEMENTS

- Reduced deployment cycle times by 80% through CI/CD pipeline automation with GitHub Actions and Jenkins.
- Achieved 90% financial data processing throughput improvement via multi-threaded Java service design.
- Automated 90% of banking sector classification processes through AI/ML API integration.
- Delivered a production-ready Bulk Payment System with Mobile Money integration using a full-stack Spring Boot and React architecture.
- Designed and delivered an Intelligent Claims Processing System using Spring Boot, working alongside a dedicated React frontend team.
